

# Cancer Oil

Approved good

One Quart best Sallad Oil, Sage, Worm wood,  
Camomile, and Southern wood of each an equal  
quantity, as much of them as your Oil will  
steep, let the herbs lay a day after they are  
gathered to Dry, put them into the Oil with  
three Ounces fine Sugar powder'd fine, let it  
stand a week before you stir it, Set it in  
the Sun for 14 Days stirring it every day  
at the end of that time Strain the herbs from  
the Oil thro' a strong Cloth Very hard then put  
into the Oil Lavender tops & Buds of Scarlet  
Roses. (the white part being cut off) as much  
as the Oil will steep when it has stood two  
Days let it Simmer on a very slow fire but  
don't let it Boyle, then Strain it and put to it a  
Pint of French Brandy while it is hot and  
Bottle it for Use ~ ~ ~ Use of the Cancer Oil

N: B: If the Roses and Lavender are not  
ready you may keep the first herbs longer  
in the Oil ~ ~ ~ to use it for a Cancer  
Annoint the Breast twice a day & keep a  
Flannel with the Oil constantly to it  
For A Throat ~ ~ ~ Clean the mouth  
constantly with it & let a little go down into  
the throat, let a little go down Day & Night  
after - It is good for Piles Burns Bruises &  
Rashes where it is not raw, Stings and  
Raw sore throats &

# Compound Spirit of Lavender

Infuse a pint of Lavender  
flowers in a Pint of Brandy  
for a week, Strain it off thro'  
a hilt of Persian add to it  
ten Grains of Cochineal a  
large Nutmeg, or the weight  
of it, of Cloves, Cinnamon,  
and Mace, pounded fine,  
Stop the bottle close; flowers  
of Rosemary are a great  
improvement to it.

# Approved Lavender Water

1 Quart Rectify'd Spirit of Wine  
1 Oz: Oil of Lavender  
1 Tea Spoonfull Essence of  
Ambergis ~ ~ ~  
mix all well together

# Gargle for Sore Throat

40 Drops Spirit Sea Salt  
1 Oz: Glasse of Roses  
8 Oz Barley Water

# Blacking for Shoes by M<sup>r</sup> Phipps

Two Ounces Ivory Black  
one penny worth Treacle  
1 Quart Small Beer

## To Destroy Buggs

Disolve  $\frac{1}{2}$  Ounce Corrosive  
Sublimate in  $\frac{1}{2}$  an Ounce  
of Spirit of Salt mix one quart  
of Spirit of Turpentine, Shake well  
together and wash all places  
where the Buggs are supposed to  
lodge with a Brush; as Rooms are  
White Wash'd — 2 of 1792

## Sympathetic Ink —

Regulus of Cobalt Dissolved in —  
marine Acid — Difficult to be dissolved  
but is necessary to be done in a Distilling  
Apparatus & to Return the Acid upon  
the Regulus — tis a pale Green Colour  
when cold & a Sea Green when Hot  
or —  
the same dissolved in Aqua Regia  
solution is Clear & Peach blossom Colour

## Another

Solution of Cobalt in Aqua Regia  
diluted in 4 times its weight of soft  
Water if it be used as Ink on good  
paper y<sup>t</sup> writing does not appear  
till the paper is warm & when  
it is a fine Sea Green Colour  
the Colour disappears when  
the paper is cold & is renewed  
when tis warmed again —  
it is an one durable on the  
paper if Nitrous Acid be add  
ed to the marine acid alone  
or the Aqua Regia alone

Wash to Hardden the  
Breasts of Horses that  
Strip with the Harness  
By Dissolve Attum in  
Water and Boil it, make  
it strong, then put half a  
pint Brandy to aduare  
of it, wash the breasts —  
Note you should at night  
put some oil on it to soften  
the Skin or Scabs —

Bottle it to use occasionally

Tincture for Browning  
Gun Barrels & preventing  
Rust by Gully Gun Maker  
Oxford Street London

One Ounce Tinctura Martis  
cum Spiritu Salis  
One Ounce Sweet Spirit  
of Nitre  
One Ounce Roman Vitriol  
mix with equal quantity  
of Water

Lay it on with a Brush or  
Feather or tow

24 hours in warm weather  
will do, in cold it takes  
more time — Brushish it  
off when Brown enough

To prepare Guaiacum  
for gout &c; —

Gun Guaiacum 4 Ounces  
Rum . . . 3 Quarts  
Infuse for a month in a  
warm place or longer as  
Convenient — often Shaking  
the Bottle —

## Butter

An approved Receipt to preserve  
Butter; from W. Anderson's Dies  
of Aberdenshire drawn up for the  
Board of Agriculture & Internal  
Improvement —

Take two parts best Common Salt  
One part Sugar and One part  
Salt-petre; beat them up together  
and blend the whole completely.  
Take One Ounce of this Composition  
for every Sixteen Ounces of Butter  
work it well into the Mass. and  
close it up for use —

Butter cured in this manner  
appeared of a rich marrowy —  
consistence, a fine Colour, and  
never acquires a brittle hardness,  
nor tastes Salt like other, which  
has the appearance of Tallow —  
Butter cured by this method  
must not be opened for use  
of a month after it is made  
he has all of it that had been  
kept three years & was as good  
as at first  
Feeping Milk in leaden Vessels  
or of Salting Butter in Stone Jars  
very detrimental on account of the  
Poison in the Dead —  
Wood most wholesome & cleanly

To Fine Madeira wine  
or all kind of White wine  
The Whites of 20 Eggs Beat  
up in a froth Stirred well  
in the Cask — for an Ell or

Half a Gallon of Milk  
the Cream taken off &  
Scalded. Stir for  
20 minutes —

Two or three  
Ounces of Singlasp  
is added for Red  
Wine

A solution of common pearl ashes, or any other alkaline salt, if given after corrosive sublimate, decomposes, and renders it nearly harmless. Two or three absolute proofs of this have been made public, and in one of the instances recorded, nearly half an ounce of the sublimate had been intentionally swallowed. Persons conversant in chemistry, will have no difficulty in accounting for this good effect being produced, even when arsenic and other mineral poisons have been taken.

# DIRECTIONS

FOR THE PROPER USING

The Glas Apparatus to make Artificial Mineral Water, by impregnating it with fixed Air, &c. &c. &c.

SOLD BY WILLIAM PARKER AND SON,

At their GLASS MANUFACTORY, No. 69, FLEET-STREET.

**T**AKE the three Pieces apart from each other, and put as much Water in the bottom Vessel as will cover its lower Surface all over; fill the middle Vessel with spring or common Water, and put the top Vessel on it; when that is done, fill the small Phial with Oil of Vitriol, and pour it into the bottom Vessel; then take the tin Measure full of powdered Chalk or Marble, and put it into the bottom Vessel through the Glas Funnel; then immediately put on the other two Vessels. Let them all stand for about twelve Hours, and the Water will then be strongly impregnated, and fit for Use. It may not be improper to shake the whole Apparatus very gently, about once or twice in every Hour, which will help the Fermentation, and discharge more fixed Air than it otherwise would do.

These Waters are recommended by the most eminent Physicians, on Account of the very great Number of Cases in which they have been highly beneficial.

By adding eight or ten Drops of *Tinctura Martis cum Spiritu Salis* to each Pint of Water, after it is well impregnated with fixed Air, it will resemble the genuine Pyrmont Water. But to render it Chalybeate, add only one Grain of Salt of Steel to the same Quantity of this Water.

N. B. A great Variety of Glasses, ready made, for Philosophical and Chymical Experiments, may be had at the above Glas Manufactory.

The process of making the

several sorts of

**1. The several Waters**  
Take a small glass bottle or jar  
about half full of water or the  
best short and no water as the  
has 23 of the middle vessel of  
the machine marked B will  
admit, to be let down by a  
brooked piece of brown wire  
let down by a thread made  
fast to the neck of Vessel D  
the respective substance  
belonging to each kind of  
Mineral water are to be put  
into the Vessel D in proportion  
to the quantity of Water in  
the Vessel B and let down  
by the wire into said Vessel  
B the chalk and Vitriolic  
Acid are put into the under  
Vessel A the whole is to be  
left to work by itself one  
night or 6 or 7 hours in the  
daytime by this method  
the water in the Vessel  
B will be fully impregnated  
by fixed air and prepared  
for use. Note—

I find this water  
is not sufficient to be  
impregnate the water  
with fixed Air, try it  
at work 3 or perhaps 4 days  
or 5 occasionally adding  
more Marble powder or  
Oil of Vitriol and find it  
think necessary

Sol Soda - 2 Drams  
Marine Salt dissolved in  
a Gallon Water of Salt  
is fully impregnated with  
fixed Air in the Machine  
This Seltzer Water by  
careful Druggist Monitors

## DIRECTIONS

For making the *Aqua Mephitica Alcalina*, or SOLUTION of VEGETABLE ALKALINE SALT, saturated with fixable Air, which has been lately discovered to be an efficacious Remedy in calculous Complaints, and other Disorders of the urinary Passages, attended with Strangury\*.—

**P**UT an Ounce (Troy Weight) of dry clean Salt of Tartar into a large Glas, China, or Stone-ware Vessel, and pour thereon nine Half-pints of Water. Rain-Water, or Water that has been boiled, if it can be collected perfectly free from Impurity, is to be preferred; if it cannot be procured, good Spring-water may suffice: stir the Water well until the Whole of the Salt is dissolved; and then set it to stand in a quiet, cool Place, with a Cover on the Top, for twenty-four Hours. The clear Liquor should then be carefully poured off, or, which would be better, drawn off with a Syphon, from any indissoluble Sediment that may remain, and put into the middle Part of the Glas Machine, which will be nearly filled thereby.

A Stream of fixable Air must then be made to pass through it, as in the Directions for impregnating simple Water with fixable Air. When the Effervescence is over, and the fixed Air has ceased to rise, a fresh Quantity of Chalk, or Marble Dust (which last is preferable) should be added, till it will ferment no longer, and then the bottom Glafs to be emptied and begin again as at first: the Liquor should be suffered to remain in the Machine, exposed to the fixable Air for sixty Hours; it will then be fit for Use, and what is immediately wanted may be taken. The Remainder, however, should be carefully drawn off into clean Bottles, (pint or half-pint Bottles are to be preferred) and immediately corked up closely and set in a cool Place, with the Mouths of the Bottles downwards, and immersed a few Inches deep in cold Water.

The above Remedy has been taken with great Advantage in calculous Complaints of the urinary Passages, and in habitual Stranguries, from a Quarter of a Pint daily, to a Pint or more. If it should feel cold at the Stomach, about a Spoonful of Tincture of Carduus, or of the compound Spirit of Lavender, may be taken immediately after it.

The Quantity generally taken, has been about four Ounces by Measure, or a quarter of a Pint thrice a Day, at about an Hour's Distance from the Time of taking Food; though, when used by Way of Prevention, Two-thirds of that Quantity may suffice.

When properly made, the Liquor should have a brisk, acridulous Taste, resembling Seltzer Water, and be totally free from any Alkaline Flavour whatsoever.

\* If the Alkaline Solution be not perfectly saturated with fixable Air, it is apt, not only to be disagreeable to the Taste and Stomach, but also to prove irritating to the Urinary Passages, which it scarcely ever is when properly prepared.

\* See Dr. Falconer's Appendix to the Second Edition of Dr. Dobson's Medical Commentary on fixed Air.

By to make Seltzer Water as here it - - - 20 Six Pints Rain or Common Water

136 Grains. . . or 2 Drams 1/2 Scruple 6 Grains Common Salt

36 Grains. . . or 1 1/2 Scruple 1/2 Six Grains Uncalcined Magnesia Alka

36 Grains. . . or 1 1/2 Scruple Sol Soda

6 Grains - - - 30 Drops Tinctura Martis cum Spiritu Salis

Impregnate well with fixed Air.

Common Salt. - 3 ℥. - each  
Magnesia Alba }  
Spring Water & fallen impregnate with  
fixed Air. - Magnesia may be left out

Seltzer Water as I make it  
To each pint water  
6 grains uncalcined Magnesia  
Alba  
5 grains Sal Soda  
22 grains Common Salt or  
water -  
to 3 Quarts which any machine  
makes 36 ℥. Magnesia  
30 ℥. Sal Soda  
132 grains Common Salt  
Impregnate well with  
fixed Air

I care, which if y<sup>e</sup> head breaks will mix again with y<sup>e</sup> Cyder and not easily be  
discharged, when the Cyder is in the Hogshead it will begin to sing for fermentation  
in about a Day or two which is discover'd by putting your ear to the Bung of the  
Vessel, let it ferment for 4 or 5 days in order to raise a spirit but no longer, too  
great a fermentation being apt to destroy the deliciousness which is necessary to  
preserve it, and give it a fine taste of the Apple. After it has work'd 4 or 5 days  
rack it into another Vessel match'd with Brimstone, the Match of Brimstone an  
ends it stops the fermentation & by keeping the Body quiet, occasions the Particles  
to subside by this means you will get your Cyders perfectly fine, or keep up the  
& deliciousness of it which by too much fermentation would necessarily go off.  
After you have got it thoroughly fine you may rack it into another Vessel match'd  
with Brimstone, & stop it up till bottling time. It may be ask'd how often you  
must rack it, the ans<sup>r</sup> is only when it is absolutely necessary when the fermentation  
can't otherwise be stop'd, too often racking is certainly not right, because it undoes  
what you have done, & occasions a good deal of the spirit to fly off, if you  
Apples are thoroughly ripe the fermentation will be so & very little that

from Mr. Richardson's management of Cyder

Let your Apples be thoroughly ripe one Bushel  
of unripe fruit being enough to spoil an Hogshead  
of Cyder by giving it an undue fermentation, if  
therefore you are obliged to mix your fruit particularly  
care must be taken that the different sorts of fruit  
are equally ripe - Press out the Juice as usual &  
throw it into a Vatt of fat with a Tap & Canal in it -  
about 30, or 40 hours after it has been in the Vatt you  
will observe an head to rise upon it, take care not to  
disturb the head or suffer it to break, as it will do  
if you neglect to Draw off the Cyder at a proper time  
when therefore the head is pretty thick, draw a glass  
of it now & then to see whether it be fine, when you  
catch it fine, draw it off into a clean Vessel, by this  
means you will get rid of a good deal of the -

approved Barm or Lewin

1 pound fine flour — } Boiled together  
2 Quarts Spring Water } for Ten minutes

Let Stand untill Blood worm then put to  
it a quart fresh Beer Barm or Twelve ounce  
Brown Sugar, twill ferment and be fitt  
to make Bread in 24 hours a larger  
quantity may be used than of Barm  
it should be put in Sponges overnight  
twill keep in Cool place 14 Days —

N.B. a part of the above will do  
to make fresh Stock

---

A perfume or Essential Oil from Flowery  
Procure a quantity of the Petals of any Flowers that  
have an agreeable fragrance, Lay Thin layers of  
Cotton which dip into the finest Florence or Linca  
oil Sprinkle a Small quantity of fine Salt on the  
Flowers and lay them a layer of Cotton & a layer  
of Flowers untill an earthen or wide mouthed  
Glass Bottle be filled Cork it & tie the top close  
with a Bladder covering, put the Vessel in a  
South aspect to the heat of the Sun and in 15 Days  
when uncover'd a fragrant Oil may be squeezed  
away from the whole mass little inferior if  
that Flower is employ'd to that Beer and  
highly Valued Oil of Roses —  
This is a curious & elegant discovery —

# An approved good Plaister

8 Ounces White Rosin	} Beat the Mastick and Frankincense in a Mortar to gether to a fine powder, then melt the Rosin, Suet, and Wax together, then put in the Powders and when they are well melted, Strain
